No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         No
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB DB

C. Natl. Acad. Sci. U.S.A. 97:9156-9161(2000).

FUNCTION: Receptor for TNFSF13B/BLyS/BAFF and TNFSF13/APRIL.

Promotes B-cell survival and plays a role in the regulation humoral immunity. Activates NF kappa-B and JNK.

SUBUNIT: ASSOCIAtes with TRAFI, TRAF2, TRAF3, TRAF5 and TRAF SUBCELLULAR LOCATION: Type III membrane protein. Plasma memb and perinuclear Golgi-like structures.

TISSUE SPECIFICITY: Expressed in mature B-cells, but not in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       H.-B., Johnson H.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PC6, a Kex2-like processing endoprotease. BS Lett. 327:165-171(1993).
PUNCTION: LIKELY TO REPRESENT A WIDESPREAD ENDOPROTEASE ACTIVITY WITHIN THE CONSTITUTIVE AND REGULATED SECRETORY PATHWAY. CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTIF. MAY BE RESPONSIBLE FOR THE MATURATION OF GASTROINVESTINAL PETTIDES. MAY BE INVOLVED IN THE CELLULAR PROLIFERATION OF ADRENAL CORTEX VIA THE ACTIVATIO OF GROWTH FACTORS.

CAPALYTIC ACTIVITY: RELEASE OF MATURE PROTEINS FROM THEIR PROPROTEINS BY CLEAVAGE OF ARC-XAA-YAA-ARC-|-ZAA BONDS, WHERE XAA CAN BE ANY AMINO ACID AND YAA IS ARG OR LYS.

SUBCELLULAR LOCATION: PCSA IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO

ABUNDANT IN THE INTESTINE AND ADRIALS, PCSB IS EXPRESSED IN THE INTESTINE, ADRINALS AND LUNG BUT NOT IN THE BRAIN.

1. DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBRYO, EXCEPT IN THE DEVELOPING MERVOUS SYSTEM, THE RIBS AND THE LIVER, BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT. AT E6.5, PROMINENT EXPRESSION OBSERVED IN DIFFERENCIATED DECIDIA. AT E7.5, INVENSE EXPRESSION IN EXTRABBRYONIC ENDODERM, AMNION AND NASCENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK SAC FOLLOWED BY A CONFINATION TO DERMANYOTOME COMPARTMENT. BETWEEN E9.5 AND E11.5, ABUNDANT EXPRESSION IN AER (THICKENED ECTODERMAL CELLS OF LIMB BUDS). AT E12.5, EXPRESSION IN THE LIMBS IS CONFINED TO THE COMDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS STAGE, STRONG EXPRESSION AND IN THE MUSCLE OF THE TONGUE. AT E16.5, ABUNDANT EXPRESSION TO THE COMPANIA EXPRESSION TO THE COMPANIA THE MUSCLE OF THE INTESTINAL VILLI. ISOFORM A IS MOST ABUNDANT AT ALL STAGES BUT SIGNIFICANT LEVELS OF ISOFORM B OCCUR AT E12.5.

1. DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC CRUTICUM.

2. DOMAIN: AC 1 AND AC 2 (CLUSTERS OF ACIDIC AMINO ACIDS) CONTAIN SORTING TOPPORATION. AC 1 DIRECTS TON LOCALIZATION AND INTERACTS.

DOMAIN: AC 1 AND AC 2 (CLUSTERS OF ACID) SORTING INFORMATION. AC 1 DIRECTS TON LC WITH THE TGN SORTING PROTEIN PAGS-1. SIMILARITY: BELONGS TO PEPTIDASE FAMILY SIMILARITY: CONTAINS 1 HOMO B/P DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE SPECIFICITY: Highly expressed in spleen and testis; detected at lower levels in lung and thymus.

DISEASE: Defects in TNFRSF13C are a cause of severe B-cell deficiency. B-cell deficient strain A/MySnJ has a 4.7 kb insert in the BAFFR gene leading to an altered C-terminus. The mutant is not detectable. B-cell lymphopolesis is normal, but the life span of peripheral B-cells is much reduced.

SIMILARITY: CONTAINS 1 TNFR-CYS REPEAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         produced by alternative splicing.

A Arterioscler. Thromb. Vasc. Biol. 1:996-1002(1997).

C -1- FUNCTION. LIKELY TO BE A MULTIFUNCTIONAL ENDOCYTIC RECEPTOR, THAT MAY BE IMPLICATED IN THE UPTAKE OF LIFOPROTEINS AND OF PROTEASES.

BINDS LDL, THE MAJOR CHOLESTEROL-CREATEN OF PLASMA,

C AND TRANSPORTS IT INTO CELLS WE PLADOCYTOSIS. BINDS THE RECEPTOR-CASSOCIATED PROTEIN (RAP). COULD PLAY A ROLE IN CELL-CELL

ASSOCIATED PROTEIN (RAP). COULD PLAY A ROLE IN CELL-CELL

C INTERACTION. BOTH ESTROGEN STATUS AND CHOLESTEROL LEVELS LACK

REGULATORY EFFECTS ON THIS RECEPTOR.

C -1- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

TISSUE SPECIFICITY: EXPRESSED ABBNDANTLY IN BRAIN. PRESENT IN THE

TESTES, ADREMAL GLANDS AND DETECTABLE IN THE LUNG.

C -1- SIMILARITY: CONTAINS 5 BNR REPEATS.

C -1- SIMILARITY: CONTAINS 1 LOL-RECEPTOR CLASS A DOMAINS.

-1- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; Y08109; CAA69324.1; -.

TISSUE SPECIFICITY: Expressed in the brain, where it is localized principally in the ependymal cell layer, choroid plexus and the area postrema. Also found in spinal chord and in the eye.

SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.

SIMILARITY: CONTAINS 9 CADHERIN DOMAINS.

SIMILARITY: CONTAINS 8 EGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 1 LAMININ G-LIKE DOMAINS.

SIMILARITY: CONTAINS 1 LAMININ EGF-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                          Signaling during nervous system formation.
SUBCELULIAR LOCATION: Integral membrane protein.
DEVELOPMENTAL STAGE: First detected at E6. Predominantly expresse in the developing CNS, the emerging dorsal root ganglia and cranial ganglia. In the CNS, expression is uniform along the rostrocaudal axis. During gastrulation, it is expressed in the vicinity of the primitive streak, and becomes present in that area at late gastrulation. At E10, detected in ventricular zones (VZ), but not in marginal zones (MZ), and weakly in other structures. Between E12 and E15, a high expression is present in
                                                                                                                                                                                                                                                                                                                         the VZ in all brain areas. No expression in differenciated neuronal fields. In the newborn and postnatal stages, expression
